

Kineo CAM offers Path Planning on demand

You have to validate and document the feasibility of mounting or dismounting your system design (maintainability, accessibility, ergonomics...)

✓ *Your internal resources come up against a critical case...*

✓ *...or are too limited to handle all simulations on time for your project?*

Like the main contractors, you are using software tools from Dassault Systemes, UGS, PTC,... ?

Before you *modify* the design,
before you *relax* the constraints,
before you *take risks*,

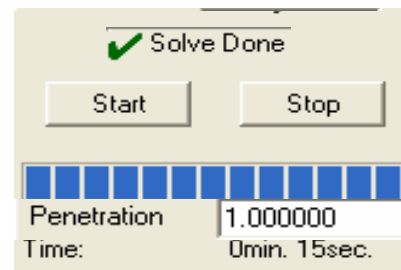

Treat yourself to benefit from this service

Kineo CAM's team, who developed the Path Planner, puts its expertise to your service on site or from its offices.

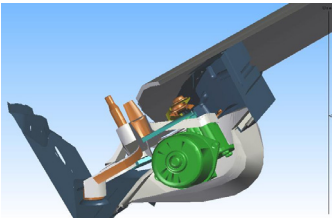

Carried out in 24h

KINEO

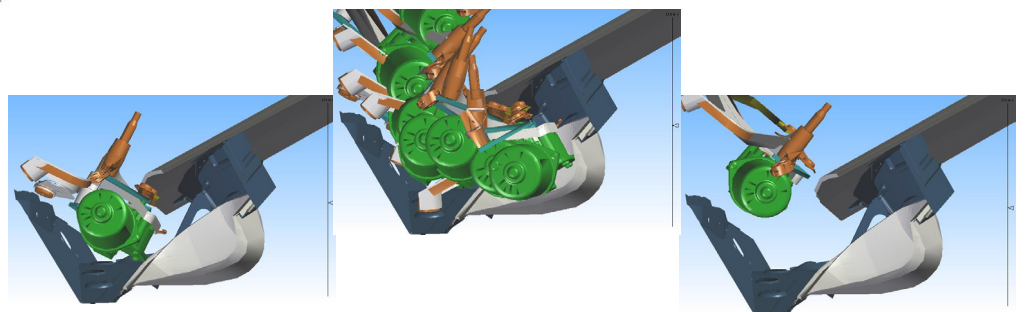

PATH PLANNER

➤ *Input: your CAD model*

➤ *Output: a track (mounting/dismounting path)*

References: Airbus, CEA, EDF, FIAT, Ford, PSA, Renault,...
